

Factoring POW

Find a general solution for the problem, what is the total T of all the factors (excluding the number itself) of a number N where $N = p^k$ for p some prime number and $k \in I$

P = 2	P = 3	P = 5																																													
$T = p^k - 1$	$T = (p^k - 1)/2$	$T = (p^k - 1)/4$																																													
<table border="1"> <thead> <tr> <th>N</th><th>K</th><th>T</th></tr> </thead> <tbody> <tr> <td>2</td><td>1</td><td>1</td></tr> <tr> <td>4</td><td>2</td><td>3</td></tr> <tr> <td>8</td><td>3</td><td>7</td></tr> <tr> <td>16</td><td>4</td><td>15</td></tr> </tbody> </table>	N	K	T	2	1	1	4	2	3	8	3	7	16	4	15	<table border="1"> <thead> <tr> <th>N</th><th>K</th><th>T</th></tr> </thead> <tbody> <tr> <td>3</td><td>1</td><td>1</td></tr> <tr> <td>9</td><td>2</td><td>4</td></tr> <tr> <td>27</td><td>3</td><td>13</td></tr> <tr> <td>81</td><td>4</td><td>40</td></tr> </tbody> </table>	N	K	T	3	1	1	9	2	4	27	3	13	81	4	40	<table border="1"> <thead> <tr> <th>N</th><th>K</th><th>T</th></tr> </thead> <tbody> <tr> <td>5</td><td>1</td><td>1</td></tr> <tr> <td>25</td><td>2</td><td>6</td></tr> <tr> <td>125</td><td>3</td><td>31</td></tr> <tr> <td>625</td><td>4</td><td>156</td></tr> </tbody> </table>	N	K	T	5	1	1	25	2	6	125	3	31	625	4	156

81	4	40																																													
N	K	T																																													
5	1	1																																													
25	2	6																																													
125	3	31																																													
625	4	156																																													
$T = (p^k - 1)/(p - 1)$																																															

Proof:

$$T = \sum_{r=0}^{k-1} p^r$$

$$T = 1 + p + p^2 + \dots + p^{k-2} + p^{k-1}$$

$$Tp = p + p^2 + \dots + \frac{p^k}{p} + p^k$$

$$-T = -1 - p - p^2 - \dots - \frac{p^k}{p}$$

$$Tp - T = p^k - 1$$

Factor T out

$$T(p - 1) = p^k - 1$$

Divide both sides by (p - 1)

$$T = (p^k - 1)/(p - 1)$$
